Australasian Association of  
Nuclear Medicine Specialists

Accreditation Program conducted by the Australasian Association of Nuclear Medicine Specialists (AANMS) on behalf of RACP

**It is the trainee's responsibility to ensure the accredited training setting fulfils their specific training requirements.**

**It is recommended that time spent within any single accredited private training setting be limited to a maximum of 12 months. Requests to complete more than 12 months should demonstrate that the training will provide a sufficiently broad and diverse training experience.**

**General enquiries should be directed to the RACP Nuclear Medicine Training Program Committee at [NuclearMedicine@racp.edu.au](mailto:NuclearMedicine@racp.edu.au)**

#### Accreditation Outcome Key:

- > ACCREDITED: An existing training setting that has gained accreditation.
- > PROVISIONALLY ACCREDITED: A new training setting that has gained accreditation.
- > CONDITIONALLY ACCREDITED: An existing training setting that has some minor conditions it needs to observe as part of their accreditation.

#### Classification Key:

- > GENERAL NUCLEAR MEDICINE: A training setting that provides a wide breadth of general nuclear medicine training experiences, usually for adult patients, but sometimes also for paediatrics.
- > CHILDREN'S HOSPITAL: A nuclear medicine department within a children's hospital that that has been accredited to provide paediatric training for rotating training placements, as per the Advanced Training LTA paediatric requirement.
- > PET ONLY: A training setting that may only provide PET training.

#### Nuclear Medicine Criterion Outcome Key:

- > MET: The training setting meets the accreditation criterion.
- > MET WITH CASE/COURSE - BMD: The training setting meets the accreditation criterion by either providing BMD cases and/or supports the trainee to complete the BMD Course.
- > SUBSTANTIALLY MET - Cardiac Cases: Training setting partially meets accreditation criteria. The trainee, with support of the training setting, may need to seek out supplementary cases at alternate training settings to meet their Advanced Training LTA cardiac requirements.
- > SUBSTANTIALLY MET - Paediatric Cases: The training setting is not an Accredited Children's Hospital, however it does see substantial paediatric cases. With submission and approval from the RACP TPC, trainees may seek recognition of this paediatric training over a 12 month period as part of their Advanced Training LTA paediatric requirements.
- > NOT MET - The training setting does not met accreditation criteria/does not provide nuclear medicine training in this area. If the trainee requires this experience, they should discuss with the training setting how the setting could support them in obtaining some supplementary cases at alternate training settings, or they may need to fulfilling this experience in other training years.
